

FOMRI IV

Speech filtered from fMRI noise with zero latency

The **FOMRI IV** superposes fMRI noise out of phase while its adaptive filter is linked to the fMRI TTL signal, enabling speech free of fMRI noise and with zero delay.

Features

- Animation of fMRI imaging with sync to speech
- Minimal artefacts of DSP on speech (better than AI algorithms).
- Can be used with speech manipulation and self-hearing

* Sold only as part of the OptoACTIVE-III system.
