Micronor Partners with Optoacoustics on Accelerometer Line

Respected Swiss automation components supplier integrates leading FOSA™ fiber optical accelerometers into its portfolio

TEL AVIV, ISRAEL (5 March 2009) – Micronor AG, a long-time leader in industrial automation components and sensing solutions, will partner with Optoacoustics Ltd to supply a comprehensive line of fiber optics-based accelerometers to customers in Switzerland and around the world.

Optoacoustics' FOSA™ accelerometers provide extremely high performance remote monitoring of machine vibration with absolute EMI/RFI immunity. FOSA sensors are ideal for use in power generation and industrial equipment, high voltage areas, hazardous or harsh environments, and aerospace applications. The FOSA line includes both single and dual axis models, for sensing in up to two orthogonal directions.

"With the inclusion of Optoacoustics' FOSA line, we feel certain our customers will benefit from a completely new range of sensing solutions," said Micronor president Josef Kaelin. "Our 50 years in the field means we must commit only to the highest quality products -- FOSA is the best there is today."

Optoacoustics CEO Yuvi Kahana expressed great satisfaction with Micronor's selection of FOSA. "Teaming up with a leader like Micronor affirms the great future that our FOSA line has in a variety of industrial and environmental applications. We're very excited about working with Josef and his team."

Micronor AG has been supplying industrial automation and motion control products to the industrial, commercial and military markets around the world since 1958. Micronor is the global "go-to" manufacturer for rotation sensor solutions. Micronor time-proven technology portfolio offers the broadest range of products available today, from electromechanical to electronic to optical to fiber optics. See: <http://www.micronor.com>

Optoacoustics is a leading designer and manufacturer of optical fiber-based acoustic and vibration sensing systems worldwide. We provide a broad range of robust, high performance, inherently safe, EMI/RFI immune solutions to medical, industrial equipment, power generation, research, government and other sectors. Optoacoustics' technology is protected by over 20 international patents. See <http://www.optoacoustics.com/>
